Dear Robert

This is my letter of summary of the success that I observed with your magnetic resonance system for the location of oil pools. Because of confidentiality concerns, I cannot comment specifically on the locations or the company involved.

In South East Saskatchewan I saw evidence that indicated that the oil concentration seemed to match the concentration of oil in one specific zone in two wells. One zone being of considerably higher thickness than the other. This more or less matched the predicted concentration from your survey.

In Mid-West Saskatchewan, we saw concentrations of specific oil in the predicted place. This oil, in this area corresponds to the small delta formations that form pools that are sometimes connected and sometimes not.

We must note that the system, as yet, cannot predict the productive ability of the oil nor the depth at which it is expected, however, as we have discussed, you are working on these problems

I remain very interested in your magnetic resonance system for locating oil and other commodities, and am willing to assist (work too) to help you succeed with this process..

Best Regards..

Sandy.
